

This is the original board with all the pieces. The columns and rows are labeled for easier use.

This is the custom board with one of the custom pieces; the superpawn. It can kill two pieces diagonally. The miniqueen can't be seen because the original queen hasn't been killed yet. But the miniqueen spawns in the original place of the queen.

Test Plan:

1. Check to see if the custom board doesn't break any of the original pieces
2. If the custom pieces work the way they should (super-pawn does because we can see it on the board: need to check for mini-queen)

3. Need to put in a message saying checkmate after which the players shouldn't be able to play further
4. If I click on New Game, all the pieces should be able to move back to the original tiles for original or custom board.
